EDUCATION

Boston University

Boston, MA

Bachelor of Arts in Computer Science

May 2027

Relevant Coursework: Data Structures & Algorithms, Geometric Algorithms, Probability in Computing, Intro. to Analysis of Algorithms, Data Science Tools, Intro Databases, Distributed Systems, Intro ML and AI

TECHNICAL SKILLS

Languages: Java, Python, HTML, CSS, JavaScript, Go, SQL

Tools & Technologies: Flask, FastAPI, React, Git, Linux, pandas, NumPy, Matplotlib, Spotipy, Tailwind, AWS, Next.js, scikit-learn, Docker

PROJECTS

Gen AI Partner Bot

Management Leadership for Tomorrow

- Built and deployed a two-function AWS SAM serverless backend for SEC EDGAR data refresh and filing lookup.
- Implemented scheduled data ingestion with EventBridge and versioned S3 storage, plus synchronous Lambda handlers for 10-K and 10-Q retrieval.

NBA Prediction Model

Personal Project

- Built full-stack prediction platform with FastAPI backend and Next.js frontend on Railway/Vercel, integrating real-time NBA API data with PostgreSQL for automated daily predictions and accuracy tracking.
- Engineered ensemble neural network with 5 models achieving 66% accuracy on NBA game predictions by training on 4 seasons of historical team and player statistics (1600+ records).
- Implemented probabilistic calibration using isotonic regression and temperature scaling ($T=1.5$) to reduce model overconfidence from 95-99% to statistically valid 75-85% confidence intervals.

P-Block (Privacy Blocker)

Boston Hacks Fall 2025; Major League Hacking

- Developed an intelligent screen privacy protection system using Python, FastAPI, and React that aims to detect and masks sensitive information (passwords, API keys, SSNs, financial data) in real-time during screen sharing and streaming
- Built a custom machine learning classifier with 25+ engineered features including regex patterns for API keys, cryptocurrency addresses, and financial data, achieving high-precision detection of sensitive text through OCR and predictive modeling

Boston Bus Inequity Analysis

BU Spark Project

- Analyzed MBTA bus data from 2017-2024 to assess service performance trends by geography and evaluate the impact on residents across those years.
- Discovered 10 of the 15 routes flagged in the Livable Streets report rank in the top 20% city-wide for average end-to-end trip delay. Between 2018 and 2024, these routes saw an average increase of + 30% in mean delay, nearly double the system-average increase of +16%.
- Analyzed weekday headway data for 151-170 (dependent on year) bus routes to calculate wait times between buses, comparing scheduled vs. actual service to assess delays on key routes with strict rush-period goals.

EXPERIENCE

Program Coordinator

Sep 2024 – Jan 2026

Boston University Orientation

Boston, MA

- Introduced a python notebook to extract actionable insights for orientation programs, resulting in a 80% reduction in processing.
- Overseeing operations and giving financial assistance to over 4,000 incoming Boston University students.

LEADERSHIP AND PROFESSIONAL DEVELOPMENT

Kappa Theta Pi - Lambda Chapter

Dec 2025 – Present

Professional Fraternity — President

Boston, MA

- Lead a professional technology fraternity of 100+ members, overseeing strategic initiatives that promote professional development and technical growth.
